Week 7 — Max Norén

- What do I want ot learn or understand better?
  - Organize more effective meetings with a structure that provides a more clear agenda. Both in planning meetings to prepare the rest of the team but also during a meeting to improve flow between subjects.
  - Draw more insightful reflections from KPIs and looking forward of what might help to improve our work in the future, future projects.
  - How to improve approval process to make a better balance of speed and quality. Currently focus has been put on speed as not everyone has reviewed pull request until approval but perhaps a better approach is to have dedicated people for approval.
- How can I help someone else, or the entire team, to learn something new?
  - Taking advantage of my understanding of the program structure and sharing it as best as I can as we continue with reflections at the end of our project.
- What is my contribution towards the team's use of Scrum?
  - Continue work as product owner in reviewing others work and making possible suggestions or requirements for approval.
  - Pushing for all members to take a look and approve pull request to meet our deliveries.
- What is my contribution towards the team's deliveries?
  - Continue participating in completing our user stories for the week, this week involving a README file, fixing bug that caused missing coordinates and keeping the text in the search field retained even as the page is reloaded.
  - Continue contributing in defining user stories and making sure they create value. Helping other team members in making as good a product as possible by providing constructive feedback on their work.
  - Helping other team members with insight and resources if they need, in this week one member got stuck so I elected to help find a solution and testing.
